Infrared spectroscopy exploits the fact that molecules absorb frequencies that are characteristic of their structure. These absorptions occur at resonant frequencies, i.e. the frequency of the absorbed radiation matches the vibrational frequency. The energies are affected by the shape of the molecular potential energy surfaces, the masses of the atoms, and the associated vibronic coupling.

A 4th-generation programming language (4GL) or (procedural language) is any computer programming language that belongs to a class of languages envisioned as an advancement upon third-generation programming languages (3GL). Each of the programming language generations aims to provide a higher level of abstraction of the internal computer hardware details, making the language more programmer ...

Abstract: We consider an attraction-repulsion chemotaxis model coupled with the Navier-Stokes system. This model describes the interaction between a type of cells (e.g., bacteria), which proliferate following a logistic law, and two chemical signals produced by the cells themselves that degraded at a constant rate.

In the early 19th century, Europe saw the emergence of "utopian socialism". Whereas in France utopian socialism is associated with thinkers such as Henri de Saint Simon, Charles Fourier and Pierre Leroux, in Great Britain it is attached to the figure of Robert Owen (1771-1858).

Tracheostomy tubes are used to administer positive-pressure ventilation, to provide a patent airway, and to provide access to the lower respiratory tract for airway clearance. They are available in a variety of sizes and styles from several manufacturers. The dimensions of tracheostomy tubes are given by their inner diameter, outer diameter, length, and curvature.

La corona solare è molto più calda (di un fattore 200) della superficie visibile del Sole: la temperatura effettiva della fotosfera è di 5777 K, mentre la corona ha una temperatura media di un milione di kelvin, ma invero si tratterebbe di temperatura cinetica.. Quindi essa ha una densità media calcolata in 10⁻¹² volte quella della fotosfera e produce un milionesimo della luce visibile.
