Thermographic inspection refers to the nondestructive testing of parts, materials or systems through the imaging of the thermal patterns at the object's surface. Strictly speaking, the term thermography alone, refers to all thermographic inspection techniques regardless of the physical phenomena used to monitor the thermal changes. For instance, the application of a temperature sensitive ...

This paper is a review of optical methods for online nondestructive food quality monitoring. The key spectral areas are the visual and near-infrared wavelengths. We have collected the information of over 260 papers published mainly during the last 20 years. Many of them use an analysis method called chemometrics which is shortly described in the paper.

Noninvasive imaging can help monitor cancer metastasis and tumor-stroma interactions but is challenging for thick, dense tissues such as bone. Dondossola et al . studied prostate cancer metastasis to bone using tissue engineering and intravital multiphoton microscopy in mice. A skin window overlaying implanted engineered bone constructs injected with cancer cells allowed for observation of ...
