A comprehensive introduction to machine learning that uses probabilistic models and inference as a unifying approach. Today's Web-enabled deluge of electronic data calls for automated methods of data analysis.

### **Machine Learning: A Probabilistic Perspective (Adaptive**

Two statistical models are nested if the first model can be transformed into the second model by imposing constraints on the parameters of the first model.

The Granger causality test is a statistical hypothesis test for determining whether one time series is useful in forecasting another, first proposed in 1969. Ordinarily, regressions reflect "mere" correlations, but Clive Granger argued that causality in economics could be tested for by measuring the ability to predict the future values of a ...

OPP uses aquatic models to estimate pesticide concentrations in food, water, non-target organisms,

residential and occupational environments. These estimated concentrations are used to assess exposure to aquatic organisms, humans, and the environment.

Abstract. The ubiquity of frustrating, unhelpful software interfaces has motivated decades of research into "Human-Computer Interaction." In this paper, I suggest that the long-standing focus on "interaction" may be misguided.
