History. The first report of a floating-gate MOSFET was made by Kahng and Sze, and dates from 1967. The first application of the FG MOS was to store digital data in EEPROM, EPROM and flash memories.

Microfabrication is the process of fabricating miniature structures of micrometre scales and smaller. Historically, the earliest microfabrication processes were used for integrated circuit fabrication, also known as "semiconductor manufacturing" or "semiconductor device fabrication". In the last two decades microelectromechanical systems (MEMS), microsystems (European usage), micromachines ...

1. Introduction. As the computational ability of processors rapidly grows, training and testing deep neural networks (NNs) become much more feasible, which substantially boost the design of various models targeting applications such as computer vision , , , speech recognition , , and even artificial intelligence (AI) for games against human beings , .

Various NBTI models have been proposed, of which the Reaction-Diffusion (R-D) model is the most prevalent , , . In this model, interface traps are generated at the SiO<sub>2</sub>/Si interface (reaction) with a linear dependence on stress time. Hydrogen is released during this reaction phase.
