### **Signals and Systems**

In communication systems, signal processing, and electrical engineering, a signal is a function that "conveys information about the behavior or attributes of some phenomenon". A signal may also be defined as an "observable change in a quantifiable entity". In the physical world, any quantity exhibiting variation in time or variation in space (such as an image) is potentially a signal that ...

Electromyography (EMG) is an electrodiagnostic medicine technique for evaluating and recording the electrical activity produced by skeletal muscles. EMG is performed using an instrument called an electromyograph to produce a record called an electromyogram.An electromyograph detects the electric potential generated by muscle cells when these cells are electrically or neurologically activated.

### **Electromyography - Wikipedia**

The Golgi complex is composed of a stack of membrane-bound cisternae located in the cytoplasm adjacent to the nucleus. The Golgi processes newly synthesized proteins (post-translational modification), sorts and routes them to their final destination.

A Transfer Function is the ratio of the output of a system to the input of a system, in the Laplace domain considering its initial conditions and equilibrium point to be zero. This assumption is relaxed for systems observing transience. If we have an input function of  $X(s)$ , and an output function  $Y(s)$ , we define the transfer function  $H(s)$  to be:

Very sadly, Dr David Lucy died on Wednesday 20 June 2018. David was perhaps best known in the forensic science community for his work on statistical models for the calculation of likelihood ratios, including his work with Prof Colin Aitken on multivariate kernel density models, and for his 2005 book Introduction to Statistics for Forensic Scientists.
