Two historical types. Two basic types of false position method can be distinguished historically, simple false position and double false position. Simple false position is aimed at solving problems involving direct proportion. Such problems can be written algebraically in the form: determine x such that $ax = b$, if a and b are known. The method begins by using a test input value x_0 , and finding ...

OK, so what is going on here? The first thing to notice is the establishment of the environment. thebibliography is a keyword that tells LaTeX to recognize everything between the begin and end tags as data for the bibliography. The mandatory argument, which I supplied after the begin statement, is telling LaTeX how wide the item label will be when printed.
